

# Avoid Being a Cyber-Statistic

*6 in 10 small businesses go out of business in six months when victim of a cyber-attack.*

In a publication by CISCO and the National Center for the Middle Market, research found six in 10 small businesses that are victims of a cyber attack go out of business within six months. Most of these cyber-attacks come from five simple threats that can easily be mitigated.

A majority of these threats come from:

- Malware on endpoints or embedded to files; and,
- A hacker taking control of your computer; and,
- Ransomware attacks demanding money; and,
- Email hacking usually involving a threat; and,
- Spyware from accessing websites; and,
- Use of IoT in your environment.

Each of these threats can be prevented within your environment through readily available technologies to include:

- Security Awareness and Training
- Endpoint Security Management
- Network Security Management
- Dual Factor Authentication
- Network Device Isolation
- Inline Email Monitoring

To implement and maintain these technologies, it takes very little time and expense. The trick is staying ahead of the game and being proactive of threats to prevent your business from becoming a statistic.

Contact us today so we can help assess your systems to see if these threats could impact your environment.
